Open Core Release 001

ACN 702 091 021 ABN 77 702 091 021

BBIP-PUB-003 | Revision 1.1 | PUBLIC

BB IP HOLDING CO PTY LTD announces **Open Core Release 001**, dated 7 September 2026. The release publishes four engineering components as a limited public interoperability layer.

Engineering boundary

- **DrillFlowCore 1.0.0** - open graph/document models, traversal, editing, validation, codecs/exporters and RigFlow interchange. Diagnostic ranking/scoring, safety decision logic and machine/site reasoning packs remain proprietary.
- **BBIPEvidenceCore 1.0.0** - open evidence/form/inventory/context schemas, attachments, roles and synchronisation interfaces. Production backend, authentication/tenancy, audit authority and persistence/reconciliation remain proprietary.
- **EFSTagCore 0.17.8** - open tag definitions, opaque references, QR parsing/encoding, public bootstrap shapes and reference rendering. Trust/authentication, operational/isolation authority, lifecycle/clone controls and customer/site policy remain proprietary.
- **ExplorationEvidenceCore 1.0.0** - open evidence/provenance/checksum/hash-chain/versioning primitives. Thresholds, predicates, ranking/scoring, decision logic and operational/project datasets remain proprietary.

Licence model. Covered source is publicly licensed under the Mozilla Public License 2.0. BBIP retains copyright in BBIP-authored code and may separately offer BBIP-owned code, or later BBIP-owned versions, under commercial or proprietary terms. Existing MPL-2.0 rights in source already released under MPL-2.0 are not withdrawn by a separate licence or later licensing decision. This preserves a dual-licensing capability; this announcement does not itself grant a separate commercial licence.

The public core is intended to support independent integration and compatible development while keeping authoritative operational systems and specialised proprietary implementation outside the release.
